

Extend the Life of Lithium-Ion Batteries

- Charge Lithium-Ion batteries fully before beginning to use the battery.
- Keep Lithium-Ion batteries fully charged when not in use.
- Charge Lithium-Ion batteries regularly, at least every few months.
- Avoid regularly running Lithium-Ion batteries too low.
- Never leave Lithium-Ion batteries discharged for long. The batteries do self-discharge and the charge could drop low enough to damage the battery.
- Keep Lithium-Ion batteries out of extreme temperatures. High temperatures may cause premature battery failure while lower temperatures can prevent batteries from fully charging.
- Store Lithium-Ion batteries in a cool, dry place if you will not be using the battery for several weeks.
